

Project Demonstration

Introduction

The project demonstration shows how the system works in real time.

Demonstration Steps

Upload sample data file, create Import Set record, run Transform Map, use Dot Walking for mapping, and verify records in the target table.

Expected Output

Data is imported automatically and relationships are created correctly between tables.

Conclusion

The project demonstrates automated data import and relationship mapping using Import Sets and Dot Walking.

The screenshot displays the ServiceNow 'Load Data' configuration page. The browser address bar shows the URL: `dev209362.service-now.com/now/nav/ui/classic/params/target/create_import_set.do`. The ServiceNow navigation bar includes the logo, 'All', 'Favorites', 'History', 'Workspaces', and a 'Load Data' button with a star icon. A search bar is also present.

The main configuration area is titled 'Load Data' and contains the following sections:

- Import set table:** Two radio buttons are shown: 'Create table' (unselected) and 'Existing table' (selected). Below the radio buttons, a dropdown menu for 'Import set table' is open, showing the selected value '@123 [u__123]'.
- Source of the import:** Two radio buttons are shown: 'File' (selected) and 'Data source' (unselected). Under the 'File' section, there is a 'Choose file' button and the text 'No file chosen'. Below this, two text input fields are visible: 'Sheet number' with the value '1' and 'Header row' with the value '1'.

A blue 'Submit' button is located at the bottom of the configuration area.

The Windows taskbar at the bottom of the screen shows the system clock as 19:07 on 06-03-2026, the temperature as 34°C, and the weather as 'Partly cloudy'. Various application icons are visible in the taskbar.
